> 1 MGD	
Kalispell	Already below variance levels; achieving avg. 0.12 mg/l TP and 10 mg/l TN. Town expected to pay an addition \$6,967,150.56 annually to achieve 2% MHI.
Bozeman	Already below variance levels; should be close to achieving 1 mg/l TP and 3 -5 mg/l TN starting in 2011/2-12. Town expected to pay an additional \$8,319,750.2 annually to achieve 2% MHI.
Helena	After optimization study, should be achieving variance levels. Currently at 3 mg/l TP and 10 mg/l TN. Town expected to pay an additional \$9,633,963.3 annually to achieve 2%MHI.
Butte	Under Order to Construct to membrane BNR Will already meet variance levels after upgrade. The \$27 million upgrade in new capital costs plus \$1.125 million in additional O&M costs which would bring them to 5 TN and 0.1 TP. Upgrade would result in 1.5% MHI. Additional costs needed?
Missoula	Already meets Clark Fork criteria w/ mixing zone. Achieving 8.2 mg/l TN; 0.16 -0.4 mg/l TP. Would the town be expected to pay more (~\$18 million annually) towards 2% MHI or not since they are achieving the criteria?
Great Falls	Conventional 2ndary activated sludge (max 21-MGD; avg. 10 MGD). Based on Billings case study, likely long-term variance limits of Level 4 for WERF (0-.1 mg/l TP; 3 mg/l TN)
Billings	2ndary treatment; Design flow of 26 MGD (avg.) and 40 MGD max. Based on Billings case study, likely long-term variance limits of Level 4 for WERF (0-.1 mg/l TP; 3 mg/l TN)

Livingston	Based on existing high costs, likely that meeting 1 mg/l and 10 TN would be the feasible limits. MHI of 3.05 percent to achieve WERF level 3.
Miles City	2011 permit; calculated variance limits to <0.1 mg/l TP; 3 mg/l TN
Hamilton	BNR facility. t w/ extended aeration system. Oxidation ditch w/ rotating brush aerators. 3 clarifiers. Upgraded in 2010.
Lewistown	Already below variance levels;BNR plant. Lready below proposed interim effluent limits (0.8 mg/l TP; 3-4 mg/l TN).

Manhattan	Discharges into Diva Ditch. Permit renewed in 2010. Denitrification with fixed film suspended growth system, clarifiers and aerobic sludge digestion, UV. DMR data from winter quarter shows 11 mg/l TN and 1 mg/l TP. 2008-2010 showed avg. TN of 14 mg/l TN and 4 mg/l TP.
Columbia Falls	Columbia Falls already meets variance level standards. Actual cost of \$3,927,688
Havre	Discharges into the Milk River. Permit renewed in 2011. Activated sludge facility with effluent chlorination. 2006-2010 data showed avg. TP of 3.4 (TN not required). 2011 DMR showed TN of 19.4 mg/l; Tp of 1.3 mg/l.

Deer Lodge	Moving from an existing lagoon to mechanical plant with land application. Ref: planning document--To get to variance only. Because this would be a land application system, so theoretically, the N and P would be zero to the Clark Fork
